Our Metrological capabilities include Temperature, Resistance, Mass, Length and Time to assure that all our measurements are traceable to the National Institute of Standards and Technology and meet or exceed our customers requirements.

Our equipment is constantly maintained and upgraded as required. The environment of our laboratory is constantly monitored and controlled to avoid any adverse affect that ambient temperature fluctuations may have on the Thermal Coefficient of the electronic measurement devices. Our personnel are trained and tested on a regular basis to assure that measurements are made consistently throughout the laboratory. Outside training includes courses and programs sponsored by NIST, or closely affiliated with NIST, to assure up-to-date information and practices are implemented in the U.S. Sensor Quality/Test department.

Stability of U.S. Sensor 100 ohm Standard Resistor
